CLASSIFICATION OF CHANGE:

Replacement with same performance

REASON FOR CHANGE:

Vendor supply chain issues.

EXPECTED INFLUENCE ON QUALITY/REALIABILITY/PERFORMANCE:

Some information provided on documents such as customer drawing and manual may differ from provided customer connection lugs. Wire range 350MC - 6Awg was maintained, but size of torque screw and torque was updated due to a shift in manufacturer. Previously required tool was [3/8 hex] with torque of 375 lb-in, the new terminals require tool [5/16 hex] with torque of 275 lb-in. Please refer to torque designator labels near/on customer connections when uncertain.

TIME SCHEDULE:

Changes will occur starting on shipments after August 24th, 2022, and will end subject to stock availability of standard terminals.

PRODUCT IDENTIFICATION:

HGP and HGL filter part numbers are not changing.

This PCN is considered approved, without further notification. Returns based on the prior design will not be accepted.
